

## USER MANUAL

Welcome, to the next era of smoking. H2OLeaf is proud to offer users the ability to fully customize their e-cigarette experience, please visit [H2OLeaf.com](http://H2OLeaf.com) for more information and a variety of products available. The Leaf is a nonflammable electronic atomizing device that uses advanced microelectronic technology, allowing users to inhale nature's vapor. The prefilled cartridges come in a variety of flavors and nicotine content, enabling inhalers the ability to enjoy their favorite taste sensations, while delivering USA made nicotine and ingredients. The use of this product is intended to be an alternative to cigarettes, although the FDA has not evaluated or certified the use of electronic cigarettes as a stop smoking device. To quit smoking, please consult your doctor or pharmacist.

1 X Wall charger

1 X USB

1 X Charging Case

BATTERY

CARTOMIZER

REFILLABLE CARTRIDGE

USB CHARGER

WALL CHARGER

CAR CHARGER

CHARGING CASE

### BATTERY

E-cigarettes run on a battery to produce the charge needed to create a vapor. The eCig battery is a rechargeable lithium-ion battery which comes in different sizes and colors. They can be automatic (activated when you inhale) or manual (activated by the press of a button). The battery is encased in a stainless shell that also contains a smart-chip and LED indicator. These components function together as the nerve-center of the device.

60.00 mm

84.00 mm

### CARTRIDGES

The cartridge of the eCig comes in 2 different styles. One is called a cartomizer, which comes prefilled with your choice of flavor and nicotine content. Cartomizers contain the atomizer component which produces the vapor. The other style of cartridge offered is refillable, allowing the user to fill them with their favorite flavor, or mix them to create your own. Refillable cartridges do not have the atomizer built in, as atomizers will lose their ability to produce vapor over use, they will need to be replaced.

### CHARGING THE CHARGING CASE

- The light on the side of your charging case will blink about every two minutes to notify you it needs to be recharged.
- Plug the supplied USB cable into your case and charge with the wall charger or car charger.
- The light on the pack will turn on while charging.
- The light will turn off once the pack is completely charged.

*CAUTION: Use only the provided USB cable when charging your starter pack. Using other chargers may harm your Starter Pack and can void your warranty.*

### REPLACING BATTERIES

- The green LED at the end of the battery will blink 30 times intermittently to signal it is ready to be recharged.
- To replace the empty battery, unscrew the battery from the cartridge.
- Grab the fresh battery from your H2O Leaf charging case and reattach it to the cartridge.
- Place the empty battery in the charging slot of the case or screw into USB cable to charge.

Note: During use, the LED light will flash 5 times to warn you that you are overusing your H2O Leaf electronic cigarette and you should take a break. This does not affect performance and does not mean you should recharge.

### REPLACING THE E-CIG CARTRIDGE

- When the cartridge no longer produces vapor, it should be replaced. A typical cartridge will last 200-300 puffs.
- To replace the cartridge, hold the battery with one hand and unscrew the cartridge from the battery.
- Take a new cartridge and screw it onto the battery and you are ready to resume.
- Simply throw the landfill-safe cartridge away.

Note: If you are not planning to use your H2O Leaf electronic cigarette for a significant period of time, unscrew the cartridge from the battery slightly so it is not activated while not in use. Leave the plastic cap and leaf seal on your cartridges until you are ready to use them.

### SET UP/INITIAL USE

- Make sure to fully charge the batteries and case before use.
- Attach a new flavor cartridge to the battery.
- Press the H2O Leaf electronic cigarette to your lips and inhale. The LED light at the tip glows green so you'll know it is working.

### USING THE USB CABLE TO CHARGE BATTERIES

- Plug the supplied USB cable into the car charger or wall charger
- Screw the battery onto the USB cable
- The LED light will blink to let you know the battery is charging
